Security News & Information for Professional Managers Volume 7 Issue 3

OUR COMMITMENT

As a Security Professional, it is our job to assist you in performing your security related duties. We desire to be a genuine asset to your firm and to become an important member of your management team. Our goal is to assist you in solving and preventing security problems so that you can be more productive. Ultimately we would like to help you increase security, decrease risk and help you control or reduce your ongoing security related operating expenses. We recognize that physical security is only a small part of your overall responsibility. But for us, your security is our primary concern.

SECURITY MANAGEMENT

Does It Drive You Crazy to Rekey Your Locks Every Time an Employee Leaves?

Who has copies of your keys? How many employees' who have keys, quit? How much do you spend rekeying your locks each year?

As a business owner, you recognize the security risk you incur if you fail to change your locks after an employee has left your employment. You know that former employees have had access to keys and that they could have easily made a copy of your key. But you also know, that the costs can really add up if you are always having to rekey your locks every time an employee leaves.

Increase Security, Reduce Costs

If you are like most small business owners and you use a single door as your primary entrance, chances are you can use an "interchangeable core" system to increase your security and save you both time and money.

An interchangeable core lock uses a special cylinder that accepts a center "core". The core holds the operational

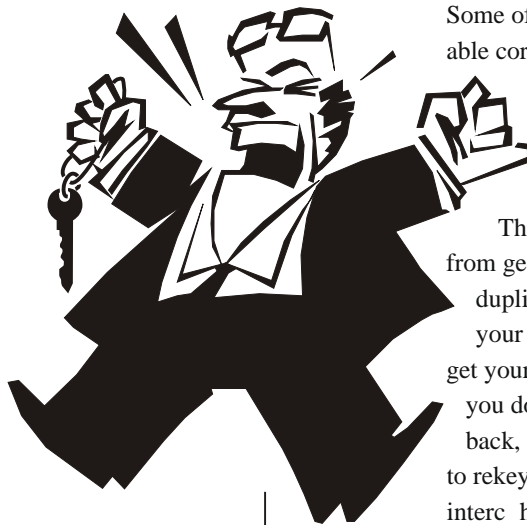

part of the lock and can be removed and replaced with its own specific "control key". This makes it simple to rekey the lock without having to remove the entire lock assembly from the door.

Key Control & Convenience

Some of the interchangeable core locks also use keyblanks that are not available in hardware stores and other key kiosks.

This keeps employees from getting unauthorized duplicates and maintains your security when you get your key back. When you don't get your key back, and it is necessary to rekey, the interchangeable core can be easily removed and

replaced which reduces many of the costs associated with rekeying locks.

Interchangeable Core Cylinders allow the lock to be rekeyed without having to disassemble the lock.
